

Minerva Networks to Showcase Advanced IPTV Applications at TelcoTV 2009

*Network-based DVR, Restart TV, Pause-Live-TV, enhanced navigation and social networking
Widgets will be demonstrated as upcoming features of iTVManager*

Orlando, FL — November 9, 2009 — Minerva Networks, the leading provider of open solutions for the delivery of television services to IP connected devices, will showcase upcoming features of its fourth generation platform at the Telco TV 2009 show. The Company will demonstrate advanced capabilities including Network-based DVR (nDVR), Restart TV, Pause-Live-TV, enhanced navigation and social networking Widgets.

Network-based digital video recording, which enables any set-top box in the home to access media recorded and stored in video servers within the operator's network, will further enhance the appeal of Minerva's DVR functionality. Service providers can offer a more flexible and personalized television experience to their subscribers while minimizing their set-top box infrastructure investment. With Restart TV consumers can join a live television program from the beginning, pause and rewind it, without any storage in the set-top box. With Pause-Live-TV even subscribers without DVR set-top-boxes will be able to pause, resume and fast forward live television programs.

Minerva will also demonstrate a set of new highly customizable and localizable user interfaces further improving opportunities for personalization of the Television services.

Leveraging its platform's powerful Widget Engine, the Company will showcase new social networking Widgets for Facebook and Twitter.

"The combination of more personalized and flexible access to legacy television programming with new Internet content and services will enable broadband operators to cost effectively differentiate their offerings", stated Mauro Bonomi, CEO of Minerva Networks. "Restart TV, Pause-Live-TV and social networking Widgets provide great value to consumers without impacting the in-home infrastructure investment."
